# **Digital Print-Ready PDFs**

Adobe Acrobat Distiller and Adobe Acrobat Pro users may download PDF profiles via our website, under "LINKS"

## **Before Exporting Production PDF:**

- Verify that all images are hi-res CMYK. (.eps or .jpeg preferred)
- Document should be your trim size
- Bleeds should be 1/8"
- Spot colors should be flagged in color palette, along with any linked files

## When prepared, select "Export", then "Adobe PDF (Print)".

Click through the first five Windows to **match the settings** as shown in each screen shot, below. (Security and Summary Windows can be left as defaults.)

#### GENERAL

#### OUTPUT – No conversion

#### ADVANCED – Subset fonts less than 50%

When done, click on the •"Save Preset" button in the lower left of the window to save these settings for future use.

Please also generate a *lo-res PDF* for reference, when submitting your project for production.

### **Special Notes:**

- While our systems reduce the possibility of banding with *vignettes*, we suggest that you request a physical proof prior to the production run. If banding occurs, adjustments to the vignette and "adding noise" can help to improve the look.
- For *large solids*, we recommend applying an undercolor for best results. We will often add 40Y + 40M + 50C under solid black. Please ask our team if you have any questions.
